Introduction	3
1 General Preliminaries	6
1.1 Torsors and Rank-One Local Systems	6
1.2 Torsors on the Étale Sites	8
1.3 Symmetric Powers of Schemes and Torsors	11
1.4 Basic Geometric Lemmas	16
2 Ramification After Blowup Is Tame	18
2.1 Ramification of Discrete Valuations	19
2.2 Ramification of G -Torsors	21
2.3 Two Reductions Before the Cyclic Calculations	24
2.3.1 Reduction from Finite Abelian Groups to Cyclic Groups	24
2.3.2 Formal–Local Reduction to $\mathbb{P}^1$	25
2.4 Three Parallel Theories of Cyclic Torsors	28
2.4.1 Kummer theory: order prime to p	29
2.4.2 Artin–Schreier theory: order p	29
2.4.3 Artin–Schreier–Witt theory: order p^r	30
2.4.4 The common realization conclusion	30
2.4.5 Three common inputs for the cyclic calculations	31
2.5 Proof of the Torsor Formulation	33
3 Geometric Class Field Theory	38
3.1 Generalized Picard Schemes and the Abel–Jacobi Map	39
3.1.1 The generalized Picard scheme	39
3.1.2 The Abel–Jacobi Morphism and Its Fibers	40
3.2 Takeuchi’s Compactification of the Abel–Jacobi Morphism	41
